

All Glass Doors

A revolving door is a brilliant way to create both a stunning visual presence and a smoother way for visitors and staff to enter your premises. Our all glass revolving doors are some of the most popular available today and for good reason. Not only does the glass provide an ultra-modern appearance, but it also lets the most light into your building, creating a more appealing visual inside and out.

Revolving doors are a unique solution that offers an entrance that is always open (receptive to pedestrians) and always closed (shielding occupants from the outside elements). Revolving doors are hugely more energy-efficient than either a slide or swing door system. On top of meeting the demands of energy efficiency and architectural appeal, revolving doors create comfort, improve traffic flow, and increase security.

Accommodate a range of foot traffic

It's important to accommodate all people when creating an entrance for your business. Our all glass revolving doors can be customised and augmented to create a safe and convenient entrance for anyone. We've worked alongside a wide range of industries and can provide an entrance that's designed bespoke for your requirements.

Features of our all glass revolving doors

- Power assisted drives for greater accessibility
- High capacity options available for a higher flow of foot traffic
- Integration with access control services
- Three or four wing options available
- A range of additional security measures such as night sliding security doors
- Designed and made in Britain
